

MIRA SOLENNE

Houston, TX | 713-555-0142 | mira.solenne@example.com | github.com/mira-solenne-labs

Professional Summary

AI engineer with expertise in Python, vector databases, and prompt engineering. Proven ability to collaborate cross-functionally with product and engineering teams to deliver scalable AI solutions.

Education

Gulf Prairie Institute of Technology

M.S. in Applied Data Science, GPA 3.82/4.00

Houston, TX

December 2023

Redwood Plains University

B.S. in Computer Science

San Marcos, TX

May 2021

Experience

Machine Learning Engineer

Northstar Lantern Analytics

August 2023 – Present

Houston, TX

- Built Python and scikit-learn risk models over SQL data pipelines, raising validated recall by 14% while holding the false-positive rate constant.
- Delivered a retrieval-augmented knowledge API with FastAPI, embeddings, and vector search, reducing median analyst lookup time by 36% in a controlled pilot.
- Containerized models on AWS with MLflow, pytest, and drift alerts, cutting failed monthly releases from five to two in six months.

Data Science Intern

Copper Finch Systems

June 2022 – August 2022

Austin, TX

- Prepared pandas and NumPy sensor features and trained a PyTorch anomaly model that improved F1 by 9% over the baseline.
- Created SQL quality checks and Git-based test fixtures, reducing recurring validation defects by 28% across four reporting runs.

Projects

CarePath Evidence Navigator

Python, FastAPI, PostgreSQL, Embeddings, Vector Search, Docker

2025

Healthcare

- Retrieved a reviewer-approved supporting passage in the top three results for 87% of 120 synthetic evaluation questions.

ShelfSense Demand Forecaster

Python, SQL, scikit-learn, pandas, MLflow

2024

Retail and Supply Chain

- Created a weekly forecasting pipeline that reduced holdout MAPE from 24.8% to 18.6% on synthetic store and product histories.

ModelWatch Release Guard

Python, Bash, AWS, Docker, MLflow, pytest, CI/CD

2025

MLOps

- Detected all eight seeded regressions and reduced repeatable manual release checks from 42 to 15 minutes.

Skills

- **Languages:** Python, SQL, Bash
- **ML, Data & GenAI:** scikit-learn, PyTorch, pandas, NumPy, NLP, Transformers, Time Series Forecasting, Computer Vision, Model Evaluation, Retrieval-Augmented Generation, Embeddings, Vector Search, Prompt Engineering
- **Cloud, MLOps & Systems:** AWS, MLOps, Docker, MLflow, Model Monitoring, CI/CD, FastAPI, REST APIs, Git, pytest, PostgreSQL
